

Remotely estimated Secchi disk depth (m) of Maine lakes in Landsat TM path 11

McCullough, I. M., C. S. Loftin, and S. A. Sader, 2012. Combining lake and watershed characteristics with Landsat TM data for remote estimation of regional lake clarity. *Remote Sensing of Environment* 123: 109-115.

MIDAS = lake identification number

Station = field sample station; lakes without established stations were assigned #1

Empty cell indicates lake station obscured by clouds.

Cell entries for each date are in meters.

Remotely estimated Secchi disk depth (m) of Maine lakes in Landsat TM path 12

MIDAS = lake identification number

Station = field sample station; lakes without established stations were assigned #1

Empty cell indicates lake station obscured by clouds.

Cell entries for each date are in meters.
